## ACADEMY PROJECTS

- 1) **MY VSTREAM** :- My VStream is php based project , it is same like YouTube , in that project there are two modules User module and Admin Module, User can create channel and upload video, post comments, edit comments, change channel name and password, search video. Where Admin can manage every channel activity like Delete channel , channel video, channel comments, it shows also how many video uploaded, comments, channels, all curd operation perform. Comments only display when admin approved that comments.
- 2) **NEWSCENTER** : - The purpose of the project is to develop an application which will display news articles and videos verified and approved at backend .User can browse news articles and videos through various categories. App will enable user to view news details, images, and video .Users can also bookmark any news article/video for future use.

The application will have three type of user's at backend one will be admin manager with having full access to backend features including user and content management. Whereas the other two users will be reporters and editors will have limited access to backend features.
